MINT

## LOVE COINS

### SCREW PRESS

In 1463 Gutenberg invented the screw press for printing books. In the years that followed, these machines were used to manufacture metal parts and in the 1700s for the coining of metals. Two machines similar to those pictured below were manufactured in the 1800s to make jewelry items and parts for watches. They produce extreme pressure when the balls are turned.

As a token of Love choose a quarter from the uncirculated commemorative State designs that we provide. Or you can provide us with an American eagle quarter with a date that is important to you. When we punch out a single heart from your choice of quarter, you will receive two matching parts cut from the same coin. You can wear both pieces of jewelry on a single chain or give one piece to your loving friend or relation. You will receive two metal chains with each order. (All quarters minted 1964 and earlier are made of silver and can be purchased from dealers on-line or acquired at local coin shops in your community).

## Heart Necklace & Matching Cut-out Samples

Standard Order (shown above) \$20:  
Background piece has no jump ring.
